

Configuration of the SIRAX® BT5100, BT5200, BT5300 and BT5400 transmitters

In order to reduce the complexity of our products and to simplify the ordering process for you, we are continuously working on optimizing our portfolio we are continuously working on optimizations. In this context, you have the option of configure the SIRAX BT5x00 series products as before via the front screen and buttons at the device or via the RS485 using the configuration software. Therefore, the previous configuration via the USB mini socket will be no longer supported.

For the configuration with RS485, the proven „Interface Convertor USB<->RS485“ (ordering 163189) is now available as a replacement for the PRKAB5000 (ordering number 176314). This allows you to configure the transmitters with just one interface on site or remotely and also retrieve values for your control system via Modbus RTU.

If you have any questions or suggestions for improvement, please do not hesitate to contact our experts.
